-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 September 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 14 rejected under 35 U.S.C. 103(a) as being unpatentable over Iino. Iino figures 11 and 12 shows a piezoelectric actuator comprising based frame #33, motion stimulator including a support member #26 and a vibrating plate which includes a piezoelectric element #14, a rotor #16 and an elastic element #32 for biasing the rotor toward the state or. Iino does not teach a reinforcing section associated with the piezoelectric plates. However, providing reinforcement for piezoelectric elements has long been practiced (official notice taken) to protect the element from breakage due to external sources, to preload the piezoelectric element to prevent it from going into tension, and/or to protect the piezoelectric element from wear and abrasion. For any of these known reasons it would have been obvious to one of ordinary skill in the art to provide a reinforcing section to the piezoelectric plates of Iino. Note that the rotor turns or rotates through a full 360° circle which

clearly includes a circular arc. (Where in said rotor is movable in a circular arc).

Claims 1-5 and 7-13 are allowed.

Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
